AUSTRALIAN CONTRACT MINING

ACM

Experienced mining contractors hardened at the rock face.

Australian Contract Mining is a full service one stop shop mining contractor. From portal to production, ACM is at the leading edge of mine development and production Australia wide. ACM have a proven track record in underground mining with the experience and expertise gained from many years hardened at the rock face. Whatever your requirements, ACM can provide the complete package from Surface Exploration to Underground Exploitation, safely, efficiently and professionally. With a solid reputation for quality and professionalism there's no better underground mining contractor for your operation than Australian Contract Mining.

- Underground mining specialists
- Proven track record
- Innovative solutions backed by experience, expertise, and the latest in mining technology
- The complete mining package

Mine Development

ACM have a proven track record in high-speed mine development from 'portal to production' using world's best practices.

Our team's are some of the most experienced operators underground. They understand the importance of maintaining an efficient work schedule and delivering on time and on budget. Our capabilities include all underground gold and base metals mines, from large-scale ore bodies to narrow vein lodes that require specialised mining techniques.

Experienced high speed mine development contractors

From large-scale massive ore bodies to narrow vein lodes

Mine Production

From bulk mining to selective ore extraction, ACM can provide tailored mine production services to suit your requirements.

Our modern fleet of drills, LHD's and dump trucks are capable of the largest to the smallest jobs. Our production personnel have vast experience from specialised hand held mining techniques, to large-scale caving operations. We know the importance of managing the drill and blast activities and delivering against agreed targets and schedules, safely and efficiently.

Mine Rehabilitation

Giving an old mining project a new lease of life is no easy task.

The margins can be tight, and the challenges can be great. Whether it's rehabilitating a decline, or refurbishing a deep shaft, ACM have the equipment, personnel and the know-how to ensure your project is completed no matter how demanding.

Specialists in mine rehabilitation declines or shafts

Unique ability to drill box holes or 1.8m diameter, raise-bored holes

Raise Boring

Slot raises, back filling and narrow vein-mining using a multipurpose, lightweight Robbins Raise Bore Box Hole drill rig.

This rig is a low profile raise drill, making it ideal for down reaming and up-hole box hole boring and conventional Raise Boring. This machine is capable of a 600m long by 1.5m diameter raise-bored hole, and is suitable for all slot raises and escapeway systems of between 1 - 2m in diameter.

Advanced multi-purpose RC diamond drill rigs for all your drilling requirements

Surface Diamond Drilling

We have the fleet and expertise to complete your exploration drilling programme quickly and efficiently.

From Air core to Rab, RC and Diamond Drilling, including directional drilling and wedging, we provide the full service. Our fleet includes Reverse Circulation (RC), Diamond and multi-purpose RC/Diamond rigs. We can drill RC to 450m and Diamond to 2,000m in any terrain. Gold, nickel, copper, iron ore, tin, uranium, coal and diamonds... you name it, we've drilled it.

Underground Diamond Drilling

Quality core presentation along with reliable survey and orientation data is everything in underground exploration drilling.

From short hole localised ore definition drilling to deeper large-scale exploration programs, we have a rig for every job. Our drilling crews operate safely and have the expertise to deliver your exploration programme on time and on budget.

Underground exploration drilling in any terrain in any direction

Alimak Mining

Blind raising between two levels, or from underground to the surface, first time every time. Breaking through on target regardless of the ground conditions.

Our highly specialised Alimak methods developed over 30 years provide the ability to install ground support and the grouting of water inflows as the raise is being excavated. This ensures raises can be developed successfully through any rock type, even in highly stressed or poor ground conditions.

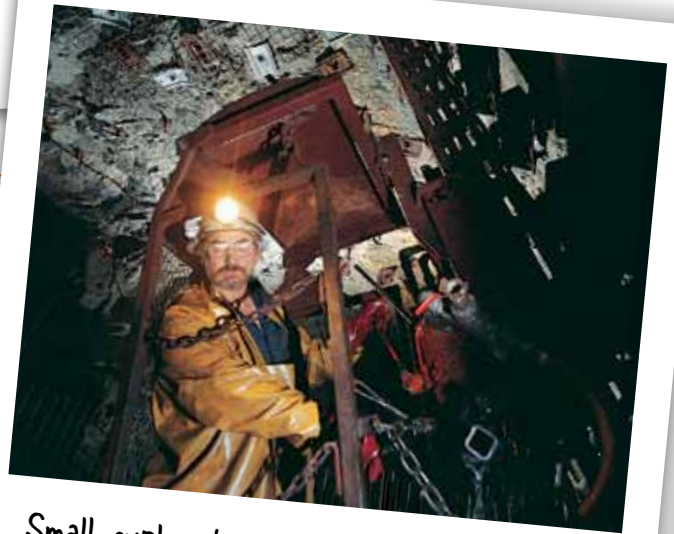

Increasing vertical development productivity underground

Shaft Sinking

Sinking of small exploration winzes to large diameter deep concrete lined shafts sunk blind or stripped and lined from pilot raises or raise-bored holes.

Being very experienced in this field, ACM have developed specialist steel equipping techniques allowing 1,000m of shaft equipping to be completed in under eight weeks. Our specialised shaft drilling systems allow fast drill outs in small diameter shafts with the use of shaft jumbos for increased sinking speed and safety in large diameter shafts.

Small exploration winzes to large diameter deep shafts sunk safely and quickly

Open Pit Mining

Our earthmoving services are available for boxcuts or medium sized open pit operations.

Our specialised team will focus on expanding your production capabilities using a modern well maintained fleet of 85 tonne trucks and 100 tonne diggers to move what you want, when you want, where you want with precision, efficiency and safety.

Extracting ore and overburden with precision and efficiency
